1 The information published in this report is consistent with the information published in the Annual Report 2024 of Zurich Life Insurance Company Ltd, as well as the regulatory reporting of the Zurich Life Insurance Company Ltd for the year 2024, including the regulatory reporting to the Swiss Financial Market Supervisory Authority FINMA (FINMA) on the Swiss Solvency Test, in accordance with art. 25 ISA and art. 53 ISO. While the financial statements and the information therein were subject to audit by the statutory auditor of Zurich Life Insurance Company Ltd, Ernst & Young Ltd (see Appendix 2), there was no external audit or review of this report. Please further note that, while this report has been filed with FINMA, FINMA has not reviewed the report. The SST calculation for the year ended December 31, 2024 has been filed with FINMA in the 2024 SST reporting in April 2025. In line with the normal timeline for FINMA reporting, the ZLIC 2024 SST reporting remains subject to regulatory review.

All amounts are shown in Swiss francs and rounded to the nearest million unless otherwise stated, with the consequence that the rounded amounts may not add up to the rounded total in all cases. All ratios and variances are calculated using the underlying amounts rather than the rounded amounts.

Zurich Life Insurance Company Ltd (continued)

Overview

Business profile

Zurich Life Insurance Company (ZLIC), is a life insurance company domiciled in Zurich, Switzerland. ZLIC is 100 percent owned by Zurich Insurance Company Ltd (ZIC), which in turn is fully owned by Zurich Insurance Group (ZIG).

Gross written premiums (GWP)

CHF 1.3 billion

Net income after taxes

CHF 124 million

Total investments

CHF 15.7 billion

System of governance

ZLIC has a strong corporate governance framework that is implemented in its daily business providing the basis for ZLIC to create sustainable value for all of its stakeholders.

Our enterprise risk management (ERM) framework supports ZLIC in achieving its strategy and helps protect our policyholders, capital, liquidity, earnings and reputation.

Risk profile

Taking risk is inherent to the insurance business but such risk-taking needs to be done in an informed and disciplined way, within a pre-determined risk appetite and tolerance. This is the primary objective of Zurich's risk management.

ZLIC uses its Total Risk Profiling™ process to monitor both external and internal risks to our strategy and financial plan. ZLIC's key risks in 2024 were focusing on uncertainties related to asset market volatility and investment returns, reserve adequacy, data protection and privacy, business resilience and development and use of AI solutions. The significant risks for ZLIC, as measured by Swiss Solvency Test economic capital metrics, are: market, insurance and credit risk.

Financial condition

Total shareholders' equity (according to Swiss local statutory reporting):

CHF 970 million

Swiss Solvency Test ratio as of December 31, 2024

Introduction

Introduction

The Zurich Life Insurance Company Ltd (ZLIC) financial condition report is prepared in compliance with Art. 25 Swiss Insurance Supervision Act (ISA) and FINMA's Circular 2016/2 'Disclosure – insurers' and is not audited. The report focuses on the 2024 financial year, and should be read in conjunction with the audited ZLIC Annual Report 2024 (available on: http://www.zurich.com/en/investor-relations/results-and-reports/other-statutory-filings). Wherever applicable, this report makes reference to the Zurich Insurance Group Financial Condition Report or the Zurich Insurance Group Annual Report. Refer to these reports for more information.

ZLIC is part of the Zurich Insurance Group, which maintains a strong capital position. As of December 31, 2024, the Insurer Financial Strength Rating (IFSR) of ZIC was rated 'AA/stable' by Standard and Poor's, 'Aa2/stable' by Moody's and 'A+(superior)/stable' by AM Best. AM Best's Issuer Credit rating is aa/stable. Furthermore, Zurich Insurance Group's unaudited estimated SST ratio was 252 percent as of December 31, 2024.

The ZLIC Financial Condition Report (FCR) is a standalone report reflecting the current situation of ZLIC. The results will be consolidated into the Zurich Insurance Group Financial Condition Report.

1. Executive summary

The Financial Condition Report was produced in accordance with FINMA Circular 2016/2 'Disclosure – insurers: Fundamental principles in reporting the financial position'.

Business activities

Zurich Life Insurance Company Ltd (ZLIC) is a top five life insurance provider operating primarily in the Swiss market. ZLIC serves two main customer segments – private customers through its Individual Life business (IL), and Group Life insurance through its Corporate Life and Pensions business (CLP).

Performance

ZLIC reported net income after taxes of CHF 124 million in 2024, which is an increase of 6 percent compared with the previous year's result of CHF 117 million. The overall increase of net income after taxes compared with the prior year was mainly attributable to the robust business model and balanced business mix. ZLIC maintained a strong capital position with total shareholders' equity of CHF 970 million and CHF 1,021 million as of December 31, 2024 and 2023 respectively.

Gross written premiums increased by 5 percent to CHF 1,275 million compared with CHF 1,215 million in 2023. This increase was mainly driven by the growing business in both Group Life as well as Individual Life.

Corporate governance and risk management

Several governance bodies exist within ZLIC which aim to ensure adequate oversight of ZLIC. In line with legal and regulatory requirements, ZLIC has a Board of Directors (Board), an Audit & Risk Committee (ARC) at Board level, and a Management Board. These bodies meet regularly (at least four times per year) to ensure appropriate oversight and control (including activities on branch/business). There are also quarterly branch/business oversight meetings to support the oversight and control process on a Board and Management Board level.

ZLIC has established a 'three lines of defense' approach, aimed at clearly identifying, assessing, owning, and managing risks.

- As the first line of defense, business management takes risks and is responsible for day-to-day risk management (i.e., risks are identified and monitored, mitigation actions are implemented, and internal controls are in place and operating effectively).
- The second line of defense consists of the two control functions, risk management and compliance. Both functions provide independent assurance. The risk management function provides the overall risk management framework, independent challenge, oversight, monitoring and advice to support the first line in managing risks. Compliance supports ZLIC in establishing and assessing principles, processes, and control structures that support adherence to legal, regulatory and internal requirements. For certain compliance risks, Compliance provides specialized assistance to the risk owner(s) through risk-specific policies, risk evaluations, process and control analysis and advice, training and awareness, designing controls and monitoring operations.
- Internal audit (the third line of defense) performs independent, risk-based and objective audit activities to systematically evaluate and challenge the adequacy and effectiveness of ZLIC's governance, risk management, and internal controls.

Other governance and advisory functions, such as legal and actuarial, help business management to manage and control specific types of risks.

An internal control system is in place to provide assurance around ZLIC's operations.

Introduction (continued)

Risk profile and solvency

FINMA established the Swiss Solvency Test (SST) to quantitatively measure risk. ZLIC files the SST ratio annually with FINMA. ZLIC's largest risk is market risk, which constitutes approximately 48 percent of the total CHF 2.7 billion undiversified target capital. Credit migration and default risks contribute a further 15 percent. Morbidity is a further important risk for ZLIC. ZLIC faces expense risk and there is also longevity risk related to Swiss annuities. Once a year, ZLIC's key risks including operational risks are also assessed in a Total Risk Profiling™ (TRP) analysis. Mitigation actions are defined where necessary and tracked.

For reporting SST, assets and liabilities are valued on a market-consistent basis in ZLIC's market-consistent balance sheet (MCBS). In 2024 the risk-bearing capital for ZLIC increased by CHF 0.1 billion compared with 2023 mainly due to new business and high returns in equity and real estate in particular, changes to the market value margin introduced by FINMA, partially offset by the impact of the proposed dividend and operating variances.

ZLIC's capital management is mainly governed by SST, statutory equity, tied asset and liquidity requirements, which ZLIC follows in accordance with FINMA guidelines and statutory law. For the tied assets coverage, reserves are calculated on a prudent, statutory basis.

The ZLIC SST ratio as of December 31, 2024 increased to 262 percent, up from 254 percent one year earlier mainly due to new business and high returns in equity and real estate in particular, changes to the market value margin introduced by FINMA, partially offset by the impact of the proposed dividend and operating variances. ZLIC's capitalization remains strong as measured by SST.

The data, methods, and results of the Swiss Solvency Test for ZLIC are produced in accordance with the Insurance Supervision Ordinance (ISO, art. 21 seqq.). ZLIC's SST is calculated using the SST standard model.

Dividend

In 2024, ZLIC paid a cash dividend of CHF 175 million to ZIC. The ZLIC Annual General Meeting held on April 15, 2025 approved a cash dividend of CHF 165 million. According to the applicable SST valuation requirements, ZLIC's SST ratio as of December 31, 2024 published in this report reflects the dividend payment of CHF 165 million.

Outlook

In 2025, the key priorities will be to address customer needs by promoting a balanced product mix, further leverage bank distribution and partnerships, enhance investments in essential IT infrastructure, and establish a strong customer service culture. This will allow ZLIC to deliver sustainable, profitable growth in a changing and more competitive business environment.

The Company's management continues to carefully monitor developments in regulatory and legal requirements.

2. Approval of the Financial Condition Report

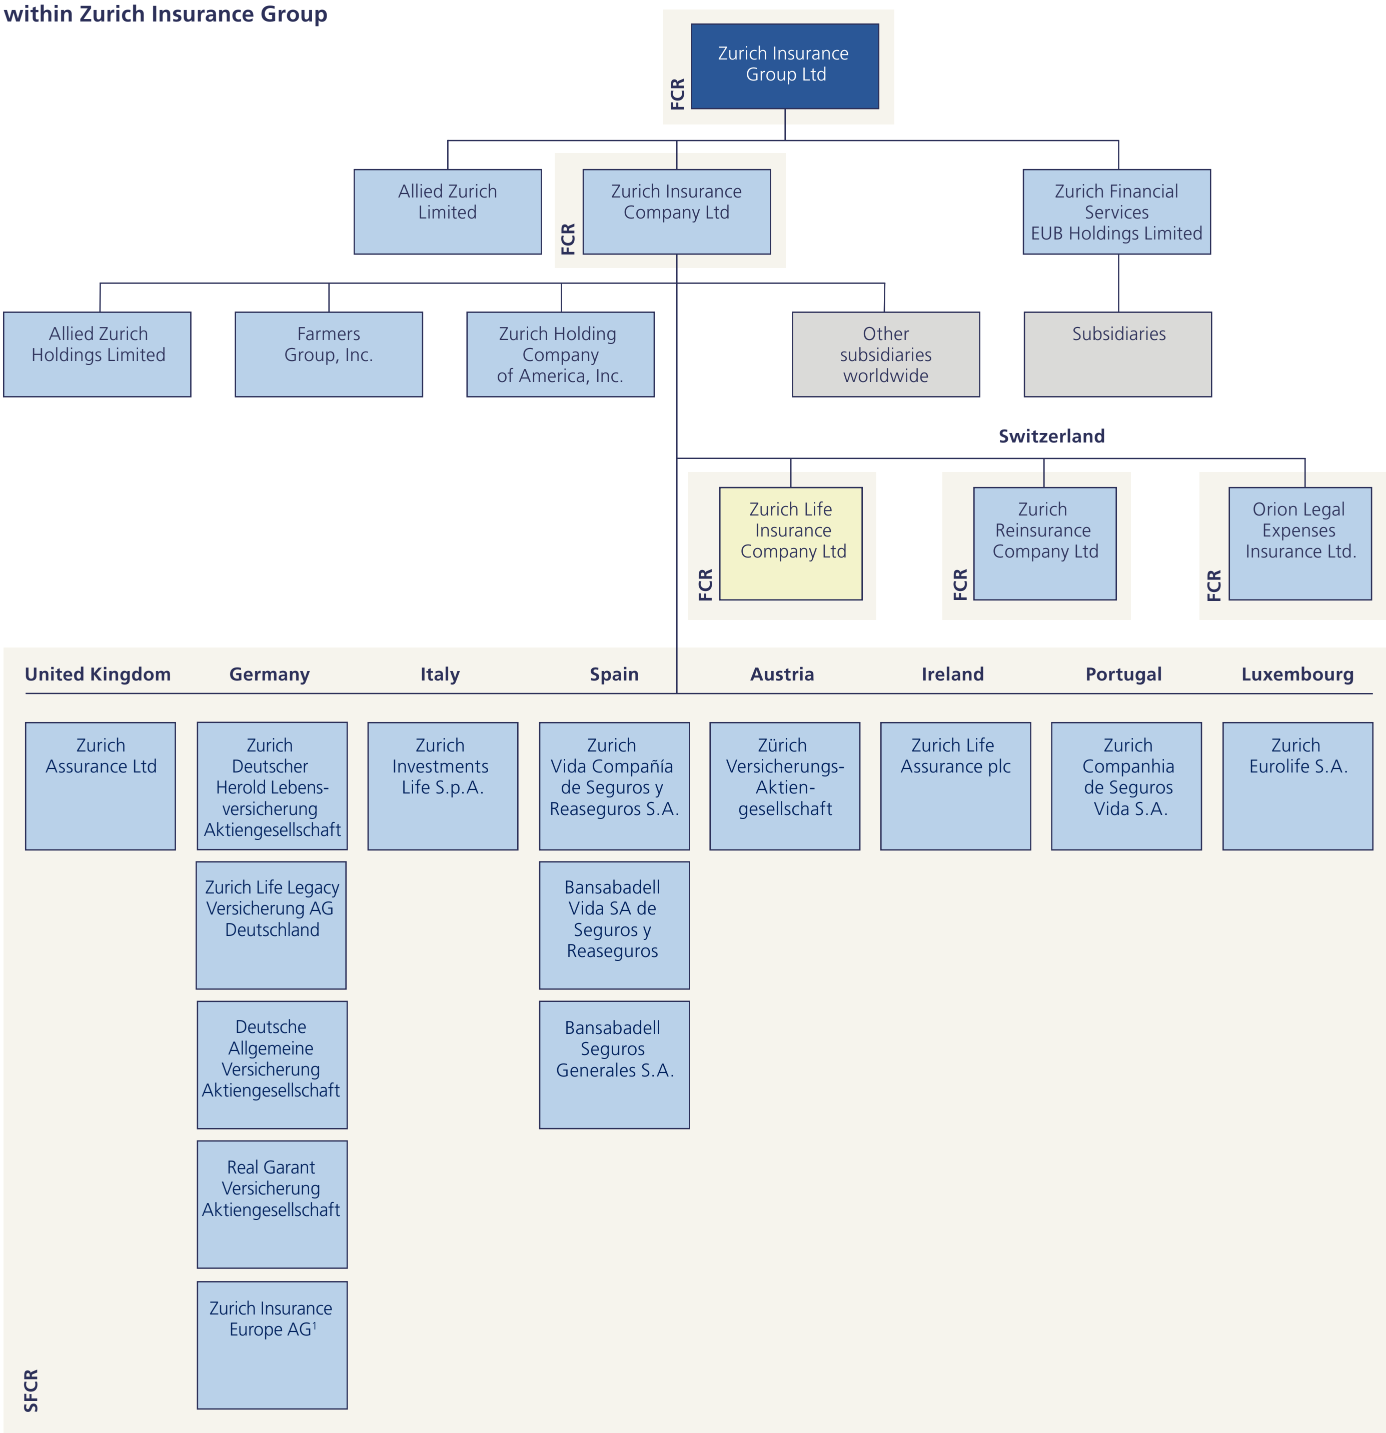
The 2024 ZLIC FCR was reviewed by the Management Board and then approved by the Board of Directors on April 15, 2025.

A. Business activities

A.1 Legal structure and major subsidiaries and branches

ZLIC is a life insurance provider serving both retail and corporate customers, primarily in Switzerland as well as through its branch in UAE. ZLIC is 100-percent owned by Zurich Insurance Company Ltd (ZIC), which in turn is fully owned by Zurich Insurance Group ('Zurich' or 'the Group').

Public reporting on solvency and financial condition within Zurich Insurance Group



SFCR: Solvency and Financial Condition Report (local regulation based on Solvency II; from 2016 except Zurich Assurance Ltd)
FCR: Financial Condition Report (Swiss regulation; from 2017)

Subsidiary · Group of subsidiaries · Current disclosure

Note: The purpose of the chart above is to provide a simplified overview of the Group's major subsidiaries (as of December 31, 2024), with special focus on the public reporting of their solvency and financial condition. Please note that this is a simplified representation showing entities that must publish such a report and therefore it may not comprehensively reflect the detailed legal ownership structure of the entities included in the overview. The ordering of the legal entities under each country is not indicative of ownership; these are independent legal entities.

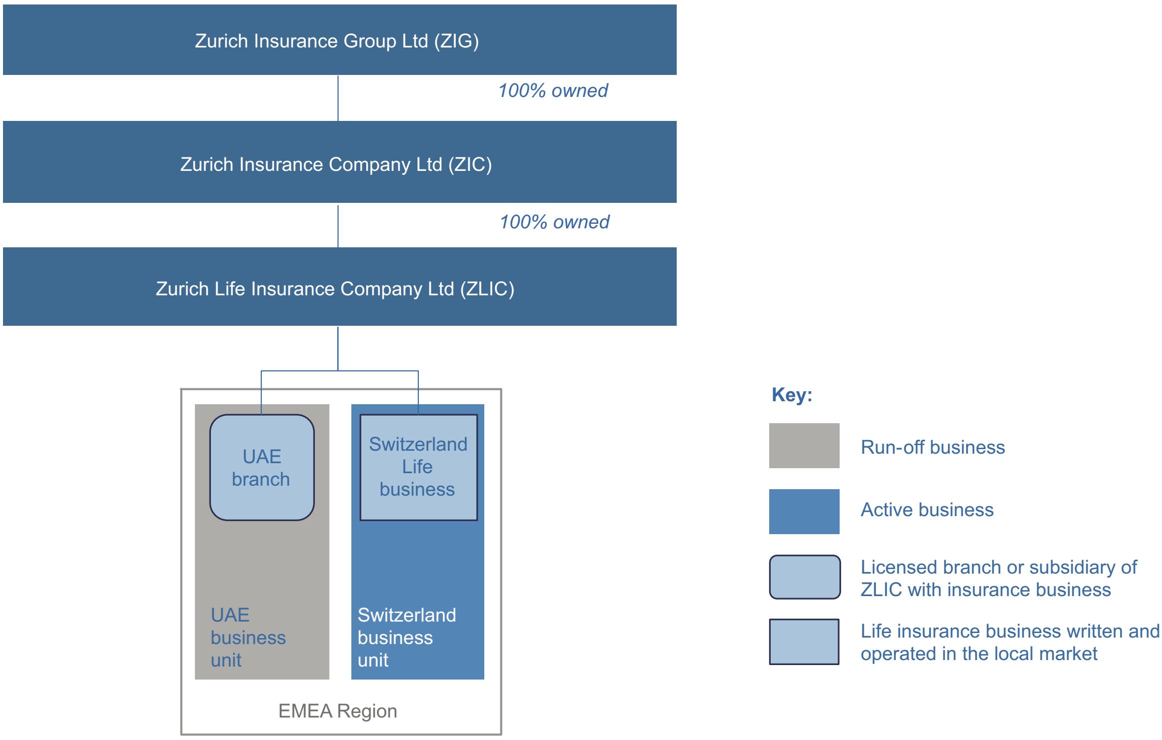
1 Effective January 2, 2024, the registered head office of Zurich Insurance plc (ZIP) was moved from Dublin, Ireland to Frankfurt, Germany by means of a cross-border conversion under the European Directive on cross-border conversions, mergers and divisions. While ZIP has converted to a German AG known as Zurich Insurance Europe AG (ZIE), it has preserved its legal personality in the conversion (i.e., no transfer of assets, dissolution or winding up were involved in this move).

A. Business activities (continued)

The Group discloses more information on its risk and capital management in its risk review, an integral part of the Zurich Insurance Group Annual Report and Financial Condition Report available on www.zurich.com.

ZLIC entity structure

The chart below shows the simplified ZLIC entity structure as of December 31, 2024.



Significant subsidiaries and shareholdings
The chart above shows the simplified ZLIC entity structure as of December 31, 2024.

Significant indirect subsidiaries
ZLIC had no significant indirect subsidiaries as of December 31, 2024.

Quantitative and qualitative information about special purpose vehicles (e.g., risk transfer and capital transfer companies) and joint ventures
ZLIC does not currently hold any special purpose vehicles.

A. Business activities (continued)

A.2 Information about the company's strategy, objectives and key business segments

ZLIC strategy is derived from and consistent with the Group strategy. The ZLIC strategy is reviewed on an annual basis. In 2024, ZLIC confirmed the strategic focus areas and it retains the main aspects as outlined below:

- ZLIC's strategic focus remains on protection and capital-efficient savings products in full alignment with the Group's approach.
- ZLIC will continue to leverage the business model in cooperation with the Vita foundations and Zurich Invest AG in Switzerland.
- ZLIC will continue to promote profitable top-line growth by focusing on specific strategic market segments.

Switzerland

ZLIC serves two main customer segments – private and corporate customers.

The private customer business includes traditional products (term/death, endowment, annuities) and unit-linked products (hybrid unit-linked with traditional guarantees, pure unit-linked). Tied agents are its main retail distribution channel.

The corporate customer business focuses on domestic life, morbidity, and pension solutions (mainly BVG), working with Vita foundations in a mainly semi-autonomous business model. Brokers are the main commercial distribution channel. In addition, there is a small portfolio of Zurich International Group Risk Solutions offering disability and mortality cover for expats of Swiss based organizations.

In addition, the Company aims to take the role of a thought leader in education, knowledge and in building trust in the Swiss pension system.

In line with its business strategy, ZLIC continued to improve operationally through simplification, process management and digitalization. All relevant customer touchpoints were monitored on an ongoing basis and the customer service in Group Life has been recertified under the ISAE 3402 standard (type 1 and type 2). The Company also continued to focus on intelligent protection and capital efficient solutions and on maintaining a strict underwriting discipline throughout all product lines.

The sales support model has been aligned to further identify and improve cross-selling opportunities. At the same time, ZLIC has continued to leverage its main distribution channels, through agents and brokers, while seeking to establish alternative distribution channels to expand sales potential.

On January 1, 2024, the revised Insurance Supervision Act (ISA) and the revised Insurance Supervision Ordinance (ISO) entered into force. Following this revision, FINMA issued its follow-up regulation in July 2024 and the ISOFINMA entered into force on September 1, 2024. ZLIC will continue to implement the new rules and regulations

Sourcing agreement between ZLIC and ZIC (sourcing provider)

ZLIC and ZIC maintain a comprehensive outsourcing agreement with ZIC acting as service provider to ZLIC. ZLIC has outsourced all business, management and control function services (excluding non-transferable tasks, board duties and branch business) to ZIC.

A. Business activities (continued)

A.3 Information about the company’s external auditors as per Article 28 ISA 8

ZLIC’s external auditors for 2024 were Ernst & Young Ltd. ZLIC’s Annual Report 2024 including the auditor’s opinion is available at https://www.zurich.com/investor-relations/results-and-reports/other-statutory-filings

A.4 Significant unusual events

For significant events during 2024 and thereafter, please refer to the Annual Report 2024 of Zurich Life Insurance Company and Zurich Insurance Group, respectively, as well as to the news releases available at https://www.zurich.com/en/media.

ZLIC has no direct exposure to the armed conflict in Israel and the Gaza Strip and does not anticipate any material effects on its financial position or performance. While the direct exposure is limited, conflicts of this nature can contribute to uncertainty in the financial markets, potentially affecting monetary policies, oil prices and inflation. As reported earlier, ZLIC’s exposure to Russia and Ukraine is also immaterial.

In this political and macro environment, the continuation of ZLIC’s capital-light and protection-oriented strategy proved to be advantageous. Strengthened in-force activities, especially client retention initiatives, contributed to the stabilization of ZLIC’s core business in Switzerland.

B. Performance

B.1 Underwriting performance

B.1.1 Gross written premiums

Gross written premiums increased by 5 percent to CHF 1,275 million compared with CHF 1,215 million in 2023. This increase was mainly driven by the growing business in both Group Life as well as Individual Life including the Unit-linked business.

Gross written premiums by type of business

in CHF millions, for the years ended December 31	2023	**2024**
Group insurance	495	519
Individual insurance	299	290
Unit-linked insurance	421	466
Gross written premiums	**1,215**	**1,275**

B.1.2 Claims paid, annuities and loss adjustments expenses, gross of reinsurance

Total gross claims paid, annuities and loss adjustment expenses decreased by CHF 456 million to CHF 1,485 million from CHF 1,941 million in 2023. This development compared to prior year is mainly attributable to the decrease in claims paid due to lower surrenders in Switzerland.

Claims paid, annuities and loss adjustment expenses, gross

in CHF millions, for the years ended December 31	2023	**2024**
Maturity benefits	(453)	(481)
Death benefits	(117)	(117)
Annuity payments	(358)	(350)
Disability and health benefits	(187)	(201)
Surrenders	(802)	(312)
Loss Adjustment Expenses	(25)	(25)
Claims paid, annuities and loss adjustment expenses, gross	**(1,941)**	**(1,485)**

B. Performance (continued)

B.2 Investment performance

B.2.1 Investment income

Investment income increased by CHF 329 million or 49 percent to CHF 1,003 million in 2024 from CHF 674 million in 2023. This development was mainly driven by higher write-ups due to strong market performance compared with the previous year.

Investment income

in CHF millions, for the years ended December 31	Current income		Realized capital gains		Write-ups		Totals	
	2023	**2024**	2023	**2024**	2023	**2024**	2023	**2024**
Real estate	139	130	343	359	–	–	481	489
Investments in subsidiaries and associates	0	0	–	–	–	–	0	0
Debt securities	79	78	10	12	–	227	88	317
Policyholders' loans and other loans	1	2	–	–	–	–	1	2
Mortgage loans	27	26	–	–	0	0	27	26
Equity securities	10	18	30	50	0	62	40	130
Mixed investments funds	9	9	–	–	–	–	9	9
Other investments	27	25	0	6	–	–	27	31
Investment income	**291**	**287**	**382**	**427**	**0**	**290**	**674**	**1,003**

B.2.2 Investment expenses

Investment expenses decreased by CHF 227 million or 67 percent to CHF 114 million in 2024 from CHF 341 million in 2023. This was mainly driven by the overall market and interest development in 2024 leading to lower write-downs in most of the investment categories in 2024 compared with 2023.

Investment expenses

in CHF millions, for the years ended December 31	Realized capital losses		Write-downs		Totals	
	2023	**2024**	2023	**2024**	2023	**2024**
Real estate	(3)	(1)	(12)	(3)	(15)	(3)
Investments in subsidiaries and associates	–	–	–	(0)	–	(0)
Debt securities	(12)	(25)	(225)	(0)	(238)	(26)
Policyholders' loans and other loans	–	(2)	–	(1)	–	(2)
Mortgage loans	(1)	–	–	–	(1)	–
Equity securities	(2)	(11)	(23)	(6)	(25)	(16)
Mixed investments funds	–	–	–	(4)	–	(4)
Other investments	(0)	(0)	–	–	(0)	(0)
Other investment expenses	n.a.	n.a.	n.a.	n.a.	(61)	(62)
Investment expenses	**(19)**	**(39)**	**(261)**	**(13)**	**(341)**	**(114)**

B. Performance (continued)

B.3 Performance of other activities

B.3.1 Administrative and other expenses

Administrative and other expenses increased by CHF 260 million to CHF 330 million in 2024 compared with CHF 70 million in 2023. This was mainly driven by higher losses from foreign currency derivatives and transactions, partly offset by lower other general expenses compared with the previous year.

Administrative and other expenses

in CHF millions, for the years ended December 31	2023	**2024**
Administration and other general expenses	(131)	(103)
Gains and losses on foreign currency derivatives	249	(241)
Personnel expenses	(48)	(46)
Foreign currency transaction gains and losses	(141)	61
Administrative and other expenses	**(70)**	**(330)**

B.3.2 Other income

Other income of CHF 15 million in 2024 was lower compared to CHF 60 million in 2023, which included a release of non-technical provisions of CHF 50 million.

B.3.3 Comments to the income statement in Appendix 1: quantitative templates

Net income before taxes

The net income before taxes increased CHF 26 million compared with 2023. The overall increase compared with the prior year was mainly attributable to the robust business model and balanced business mix.

Gross written premiums

Gross written premiums increased 5 percent to CHF 1,275 million compared with CHF 1,215 million in 2023. This increase was mainly driven by the growing business in both Group Life as well as Individual Life.

Investment income

Investment income increased CHF 329 million or 49 percent to CHF 1,003 million in 2024 from CHF 674 million in 2023. This development was mainly driven by higher write-ups due to strong market performance compared with the previous year.

Unit-linked business

The investment result on unit-linked investments increased CHF 25 million to a gain of CHF 99 million in 2024 from a gain of CHF 74 million in 2023. This increase was driven by a strong market performance and lower impairments and write-downs compared with 2023.

C. Corporate governance and risk management

C.1 Corporate governance

ZLIC is subject to insurance supervision by FINMA. The Swiss Insurance Supervision Act (ISA) requires Swiss insurance companies to establish and maintain a corporate governance structure including an effective risk management and internal control system that is appropriate to their business activities. In addition to the supervision exercised by FINMA, ZLIC and its branch are supervised according to the requirements of relevant local supervisory authorities.

Within ZLIC there are several governance bodies that aim to ensure adequate oversight. In line with legal and regulatory requirements, ZLIC has a Board of Directors (Board), an Audit & Risk Committee (ARC) at Board level, and a Management Board. These bodies meet regularly (at least four times a year) to ensure appropriate oversight and control (including activities on branch/business level). There are also quarterly branch/business oversight meetings to support the oversight and control process on the Board and Management Board levels.

- ZLIC has established a 'three lines of defense' approach, aimed at clearly identifying, assessing, owning, and managing risks.
- As the first line of defense, business management takes risks and is responsible for day-to-day risk management (i.e., risks are identified and monitored, mitigation actions are implemented, and internal controls are in place and operating effectively).
- The second line of defense forms the risk management and the compliance function: Both functions provide independent assurance. The risk management function provides oversees the overall risk management framework, independent challenge, oversight, monitoring and advice to support the first line in managing risks.
- Compliance supports ZLIC in establishing and assessing principles, processes, and control structures that support adherence to legal, regulatory and internal requirements. For certain compliance risks, Compliance provides specialized assistance to the risk owner(s) through risk-specific policies, risk evaluations, process and control analysis and advice, training and awareness, designing controls and monitoring operations.
- Internal audit (the third line of defense) performs independent, risk-based and objective audit activities to systematically evaluate and challenge the adequacy and effectiveness of governance, risk management, and internal controls.

Other governance and advisory functions, such as legal and actuarial, help business management to manage and control specific types of risks.

C.1.1 Board of Directors (Board)

The Board, under the leadership of its chair, is responsible for determining ZLIC's overall strategy and its management supervision. Except for decisions on matters reserved for the shareholders' general meetings, it holds the ultimate decision-making authority for ZLIC. The Board prepares the AGM and implements its resolutions. In particular, the Board is responsible for taking actions in the following areas:

- ZLIC strategy and business development: The Board regularly reviews and discusses ZLIC's business portfolio including its target market, customer and intermediary strategies. The Board regularly discusses and approves major developments, pertaining, for example, to acquisitions and disposals of businesses and assets, investments, new business opportunities, mergers, joint ventures, cooperations and restructurings of books of business, as set out in ZLIC's Organizational Rules.
- Finance: The Board is responsible for reviewing and approving the [annual] financial and operating plan and establishes guidelines for capital allocation and financial planning. The Board also reviews and approves the annual and quarterly financial statements and supervises the compilation of the annual report.
- Structure and organization of ZLIC: The Board determines and regularly reviews the basic principles of the structure and major changes within management. The Board also reviews the corporate governance documentation (Articles of Association, Organizational Rules, Audit and Risk Committee Charter), which is under its competence
- Risk appetite statement: The Board reviews and signs-off on the annual risk appetite statement.

Audit & Risk Committee (ARC)

Management is responsible for preparing ZLIC's financial statements, managing risk, developing and maintaining internal controls and ensuring appropriate governance processes. The ARC serves as a focal point for discussion and communicating matters related to financial reporting oversight, internal controls, compliance and risk management, and reports on these matters to the full Board. To perform these tasks, the ARC regularly receives information about important audit findings, including adverse opinions, mitigation actions and management concerns. Internal audit, risk management and compliance functions and ZLIC's management ensure that issues affecting ZLIC's operations are brought to ARC's attention, and that action is taken as necessary.

C. Corporate governance and risk management (continued)

Composition of Board and Audit & Risk Committee (as of December 31, 2024)

Name	Residence	Position held
Stephan van Vliet	Zurich, Switzerland	Chair of the Board
Justine Kelly	Richterswil, Switzerland	Vice-Chair of the Board
Helen Keelan	Dublin, Ireland	Member of the Board (independent) Member of the Audit & Risk Committee
Thomas Hull	Uster, Switzerland	Member of the Board (independent) Chair of the Audit & Risk Committee
Richard Burden	London, United Kingdom	Member of the Board
Jing Pang	Zurich, Switzerland	Member of the Board Member of the Audit & Risk Committee

Changes to composition of Board and Audit & Risk Committee in 2024

The composition of the Board and the ARC of ZLIC changed during 2024 as follows:

- Appointment of Helen Keelan and Jing Pang as members of the Board and the Audit & Risk Committee.
- Resignation of Helene Westerlind as member of the Board and the Audit & Risk Committee and resignation of Christian Felderer as Chair of the Board.
- Appointment of Stephan van Vliet as Chair of the Board.

C.1.2 Executive management

In accordance with the Articles of Association and the Organizational Rules of ZLIC, the Board appoints a CEO for the Company and delegated authorities to the CEO. The CEO is responsible for managing the business and representing the Company, subject to the Organizational Rules enacted by the Board.

The Board also appoints the members of the executive management board (Management Board).

Under the supervision of the CEO, members of the Management Board are individually responsible for the business functions assigned to them.

The individual members of the Management Board, in particular, are entrusted with the following responsibilities:

- Implementing the overall strategy and developing individual business units, subject to any overriding directives and to the principles of a decentralized management organization.
- Achieving the strategic and operational objectives of the individual business units.
- Supporting and supervising the heads of the individual businesses as required, taking into account their needs and their level of competence.
- Promoting know-how transfer within the company and, in particular, within their area of responsibility.
- Representing the interests of their area of responsibility.
- Coordinating activities in countries with branches.
- Reporting regularly to the CEO. Upon invitation of the CEO or the Chairman, the members of the Management Board also present their reports at the meetings of the Board.

Composition of Management Board (as of December 31, 2024)

Name	Residence	Position held
Juan José Beer	Möriken-Wildegg, Switzerland	Chief Executive Officer
Andreas Henke	Zurich, Switzerland	Chief Financial Officer
Sandro Meyer	Wollerau, Switzerland	Head of Life
Andreas Fischer	Wollerau, Switzerland	Chief Investment Officer
Sébastien Crouzet	Wangen b. Dübendorf, Switzerland	Chief Life Actuary Switzerland

No changes to composition of the Management Board occurred in 2024.

C. Corporate governance and risk management (continued)

C.2 Risk management

C.2.1 Risk management framework

Enterprise risk management (ERM) is embedded in the system of governance and is designed to support the decision-making procedures by providing consistent, reliable and timely risk information and protecting Zurich's capital, earnings and reputation from risks that exceed established risk tolerances. These risk tolerances define maximum willingness and ability to take risk overall, and with respect to specific risk types. Actions are defined where necessary to mitigate potential negative consequences.

ZLIC has a defined risk appetite. The risk appetite is fixed through existing limits, e.g., severity categories for the TRP and various limits derived from the Zurich Risk Policy. ZLIC's risk appetite statement is reviewed by the Management Board. Once approved, it is signed off by the Board at least annually, and adjusted if necessary during the year. As part of the ERM, the risk management function calculates risk tolerance limits annually and evaluates actual and potential breaches. Compliance with the risk appetite statement, however, lies with the Management Board (refer to the tasks of Management Board). The risk management function and other functions, such as compliance, legal, actuarial and finance, develop and operate methodologies to identify, manage and mitigate all types of risks. Escalation procedures are in place for all risk types. The risk management function monitors overall risks, including specific risk types, and escalates any risk that exceeds the level of defined risk tolerance, in line with the governance system.

The risk management framework is based on a governance process that sets forth clear responsibilities for taking, managing, monitoring and reporting risks.

The Key Risk Management Principles outline the ZLIC risk management objectives, and the principles for risk governance and risk culture, risk appetite and tolerance, risk identification and risk assessment, risk response, risk monitoring, and risk reporting. These principles are applied to the overarching risk management approach across all risk types throughout ZLIC. They include ZLIC's risk management objectives, structure including risk aspects along the three lines of defense, as well as risk appetite and tolerance, risk assessment and reporting. The principles are elaborated on in further detail in the Zurich Risk Policy and related risk policy manuals as well as in the Compliance Charter and the Zurich Compliance Program (ZCP).

The Zurich Risk Policy is the Group's main risk governance document and therefore fully applies to ZLIC. It sets mandatory requirements for effective risk management throughout the Group. The Policy describes Zurich's Enterprise Risk Management Framework, provides a standardized set of risk types and defines the Group's appetite for risks at Group level. Risk-specific policy manuals and standards provide guidelines and procedures to implement the principles of the Zurich Risk Policy. Ongoing assessments verify that requirements are met.

An Own Risk and Solvency Assessment (ORSA) for ZLIC is completed annually. The ZLIC ORSA was submitted to the regulator in December 2024. To ensure the Board is adequately involved in the ORSA process, the ZLIC chief risk officer (CRO) provides a quarterly update, thus allowing the Board to challenge findings and consider its views in its decision-making process.

C.2.2 Risk management organization

The ZLIC CRO leads the ZLIC Risk Management function, which aims to ensure that risks are identified, measured, managed, monitored and reported throughout the entity. The ZLIC CRO is responsible for oversight of risks across the legal entity.

The ZLIC CRO has a functional reporting line to the EMEA head of risk and an administrative reporting line to the ZLIC CEO. The ZLIC CRO regularly provides risk updates to the Management Board and the Audit & Risk Committee of the Board of Directors of ZLIC.

The ZLIC risk management team is part of Zurich's Group risk management organization, which consists of central functions at Group level and a decentralized risk management network at regional, BU and functional levels.

C.2.3 Risk assessment and reporting

Risk profile reports are generated regularly at local and ZLIC levels. ZLIC has procedures (e.g., ZLIC risk appetite statement, TRP, control frameworks) to identify and report risks to senior management and the Board in a timely way. To foster risk transparency, the ARC receives the quarterly assurance report and other additional updates (e.g., annual self-assessment of the ZLIC risk management system) throughout the year.

ZLIC assesses risks systematically and from a strategic perspective through its proprietary TRP process, which allows ZLIC to identify and evaluate the probability and severity of risk scenarios. As part of the TRP process, mitigation actions are defined and executed by the business as per defined deadline, while risk management monitors improvements for mitigating the risk identified. The TRP process is integral to how Zurich deals with change, including changes in the business environment and other factors that could affect its business, and is particularly suited to evaluating strategic risks as well as risks to Zurich's reputation, capital and earnings. This process is conducted annually, reviewed quarterly and is closely tied to the strategy and planning processes of ZLIC.

C. Corporate governance and risk management (continued)

C.3 Internal control system

At Zurich, various governance and control functions help to identify and appropriately manage risks. Internal controls are in place for all material risks and Zurich seeks to ensure that they operate effectively. This coordinated effort to ensure that ZLIC's risk and control environment works appropriately is referred to as 'integrated assessment and assurance'. The Board is ultimately responsible for supervising these assurance activities. Although each party in the process maintains its distinct mandate and responsibilities, those involved work closely together, regularly exchange information, and engage in planning and other activities. This approach supports management in its responsibilities and provides confidence that risks are appropriately addressed and adequate mitigation actions are implemented.

Regarding internal controls, ZLIC follows the framework and guidelines prescribed by the Group. The Board has overall responsibility in determining the strategy and scope and setting out the goals of the internal control system. In particular, the Board regulates and supervises the internal control system. The Board has appointed the ARC to review and submit the strategy and scope of the Company's internal control system for approval to the Board on an annual basis; the ARC receives and reviews periodic reports from internal audit, risk management and compliance functions concerning the internal control system.

ZLIC considers controls to be key instruments for monitoring and managing financial reporting, compliance and operational risks. The internal control system for ZLIC aims to ensure the reliability of ZLIC's financial reporting, make operations more effective and ensure legal and regulatory compliance. ZLIC bases its internal control system on the Zurich Insurance Group's internal control system methodology.

ZLIC broadens the scope of the internal control system by using a risk-based approach and by considering the Group's requirements. This includes controls over statutory and regulatory reporting, compliance-related controls to ensure legal and regulatory compliance, as well as operational key controls. The scope of the internal control system takes into consideration the inherent risks to the operation, for example, related to processes, systems and people.

C.4 Compliance

ZLIC is committed to complying with all applicable laws, regulations and internal rules.

Compliance is a second line of defense function responsible for:

- Enabling the business to manage its compliance risks.
- Being a trusted advisor.
- Independently challenging, monitoring and providing assurance.
- Assisting management to promote a culture of compliance and ethical behaviors.

ZLIC's compliance function is vertically integrated and is led by the appointed ZLIC chief compliance officer. The ZLIC chief compliance officer has direct access to the chairman of the Audit & Risk Committee of ZLIC. The ZLIC CEO acts as matrix manager of ZLIC's chief compliance officer. In addition, there is a vertically integrated reporting line to Group compliance EMEA level. The ZLIC chief compliance officer regularly provides compliance updates to the management team and the Audit & Risk Committee of ZLIC.

ZLIC's compliance function performs its activities according to the annual compliance plan and reports on progress measured against the plan, as well as outcomes and insights, to management, the Board of Directors of ZLIC and Group compliance. The annual compliance plan is a risk-based plan and is prepared based on an independent forward-looking compliance risk assessment, assurance outcomes and taking into account key risk drivers in both the internal and external environments.

ZLIC's compliance function provides an independent compliance view on the key compliance risks to the business and performs independent risk-based assurance activities.

ZLIC's compliance function also contributes to the internal control system by providing oversight to embed awareness of group-relevant and locally relevant compliance risks and advising the business functions on possible control activities. In addition, compliance carries out independent testing of compliance risk-related controls.

ZLIC's compliance function implements Group compliance policies and issues additional compliance policies for ZLIC if required. ZLIC's compliance function supports a strong compliance culture within ZLIC through training and awareness initiatives in line with Zurich's code of conduct.

Zurich encourages its employees to report improper conduct that they believe is illegal, unethical, or violates Zurich's code of conduct, Group and local policies and/or other internal requirements. Employees are free to report their concerns to management, human resources, the Group's legal department, its compliance function, or anonymously through the Zurich ethics line (or similar service provided locally). ZLIC does not tolerate retaliation against any employee who reports such concerns in good faith.

C. Corporate governance and risk management (continued)

C.5 Internal audit

The primary role of the internal audit function, Group Audit (GA), is to help the ZLIC Board, CEO and management to protect the assets, reputation and sustainability of ZLIC. GA does this by performing independent, risk-based and objective audit activities to systematically evaluate and challenge the adequacy and effectiveness of ZLIC's governance, risk management, and internal controls.

GA develops and delivers an annual risk-based audit plan, which is updated as risks change. The audit plan covers the key risks, including concerns and issues raised by the ARC, management and other stakeholders. The ARC is responsible for approving the annual plan and any material changes to it.

GA executes the plan in accordance with GA's methodologies, processes and procedures, conforming with Global Internal Audit Standards, issued by the Institute of Internal Auditors (IIA), and in line with recognized best practices.

Audit staff are expected to be independent and objective in all assignments and to do nothing that might prejudice or be perceived as prejudicing independence or objectivity. Audit staff have no direct operational responsibility or authority over any business activities, day-to-day risk management or control activities and, to ensure independence, all GA staff ultimately report (via senior audit staff) to the Group Chief Auditor, reporting to the Chair of the ZIG Audit Committee.

GA is authorized to review all areas and has full, free and unrestricted access to all activities, accounts, records, property and personnel necessary to fulfill its duties. GA coordinates with internal and external providers of assurance services to align the timing of activities. This minimizes business impact, duplication of effort, highlights gaps in coverage of key risks, and enhances the overall value added.

GA executes the plan and reports the results of its work, in writing, to the ARC. The same report is provided to CEO and management prior to the ARC, unless a conflict of interest exists. The reporting includes, as relevant, details of the status of the plan execution, the results of audit activities performed, insights on significant audit issues raised and the status of management's corrective actions. A member of GA attends each ARC meeting.

The ARC obtains an independent and objective external quality assessment of GA at appropriate intervals. GA as a whole is, subject to a review at least every five years or more frequently, assessing its conformance to the Global Internal Audit Standards. An external quality assessment was conducted most recently in 2021. The results confirmed that GA's practices comply with all IIA standards.

C. Corporate governance and risk management (continued)

C.6 Actuarial function

The ZLIC actuarial function provides actuarial governance and reporting in line with Swiss laws and insurance regulations.

Within ZLIC, the ZLIC chief actuary coordinates the work of the ZLIC actuarial function. The ZLIC actuarial function prepares appropriate actuarial assumptions and calculates the SST and the technical reserves for use in local statutory accounts, in addition to meeting the actuarial reporting requirements of the Group. The ZLIC-appointed actuary reports to the ZLIC chief actuary and assumes the responsibilities according to Swiss insurance supervision law.

The ZLIC chief actuary reports to the ZLIC chief financial officer and is a member of the ZLIC Management Board. The ZLIC chief actuary and ZLIC-appointed actuary provide regular updates to the ZLIC Audit and Risk Committee (ARC). The ZLIC actuarial function also follows the governance, reporting and process standards set by the Group actuarial function. The actuarial function at Group level is led by the Group chief actuary, reporting directly to the Group chief financial officer. The Group chief actuary reports regularly to the Group ARC on behalf of the Group actuarial function.

D. Risk profile

D.1 Introduction and ZLIC's key risks

ZLIC is fully integrated into Zurich's Group-wide risk assessment process. For more information on ZLIC's approach to risk management, please refer to the risk review section in the Zurich Insurance Group Annual Report 2024, which describes the Group's risk management framework and risk governance, reports on capital management and capital adequacy, and presents an analysis of the main risks. ZLIC's financial strength is enhanced by being part of Zurich Insurance Group.

ZLIC uses two means to identify and assess risks. One way is through the risk and capital model required by the SST. This model quantifies financial risks which threaten the capital of the company over a one-year time horizon. The other way is the TRP, which identifies all risks that threaten the objectives and strategy of the company assessed by their potential impact on a yearly basis, either on capital, earnings or reputation over a three-year planning horizon. The TRP process is applied to identify, assess, control and monitor these risks. Mitigation actions including deadlines and owners are defined for key risks. The TRP is completed annually with management's participation. Tracking the actions taken and providing updates on risks is carried out quarterly. Risk management is responsible for managing these tasks in an ongoing and timely way as part of its regular quarterly activities.

The significant risks for ZLIC, as measured by capital metrics, are life insurance risk, market risk, and credit risk as shown in the following table.

The figures shown are based on the SST standard model used by ZLIC. The current information on solvency shown in the report corresponds to the information submitted to FINMA in April 2025 and is subject to regulatory review.

Capital required for various types of risk:

Target capital by risk type

in CHF millions, for the years ended December 31	2023	Adjustments previous period	**2024**
Derivation of target capital			
Insurance risk	942		990
Market risk	1,270		1,305
Credit risk	436		400
Diversification effects	(619)		(638)
Other effects on target capital	(146)		(188)
Target capital	**1,883**		**1,870**

The figures shown in the table above include diversification within each risk type. The respective movements are explained in section G.

ZLIC uses its assessment processes and tools, including the TRP process, to reduce the risks of strategic business decisions. The key risks identified and assessed during the TRP conducted in 2024 include:

- Asset market volatility and investment returns (market risk)
- Reserve adequacy (life insurance risk)
- Data protection and privacy
- IT security
- Business resilience
- Development and use of AI solutions

To reduce the likelihood or severity of key risks, mitigating actions have been developed and implemented. The status of these plans is monitored on a quarterly basis, including through a review of key risks and an assessment of the exposure.

The remainder of this section considers in turn each of the key categories of risk faced by ZLIC. ZLIC holds capital under the SST for life insurance risk, market risk and credit risk.

D. Risk profile (continued)

D.2 Life insurance risk

The risks associated with life insurance include:

Life liability risk

- Mortality risk – when, on average, the death incidence among policyholders is higher than expected.
- Longevity risk – when, on average, annuitants live longer than expected.
- Morbidity risk – when, on average, the incidence of disability among policyholders due to sickness or accident is higher than expected, or recovery rates from disability are lower than expected.

Life business risk

- Policyholder behavior risk – when, on average, policyholders discontinue or reduce contributions, or withdraw benefits prior to the maturity of contracts at a rate that is different from expected.
- Expense risk – expenses incurred in acquiring and administering policies are higher than expected.
- New business risk – volumes of new business are insufficient to cover fixed acquisition expenses.

In the course of doing business, ZLIC may be exposed to making greater-than-expected current and future payments resulting from taking on those risks. Life insurance risk exposure stems primarily from changes in the expected value of provisions.

Life insurance risk is actively monitored, primarily by the ZLIC actuaries. In calculating premiums and reserves, the actuaries rely on the relevant local mortality, longevity and morbidity tables, as well as on tables developed internally, and use forecasting tools to estimate how the books of business will likely develop. Their analyses are presented to the Management Board to determine if proposed measures are sufficient to counter any negative developments.

Concentration risk arises if a company engages in single or highly correlated risks that have a significant potential for damage or loss in underwriting and investment.

Due to diversification, concentration risk in underwriting is very low. Large risks are passed on to reinsurers. There are effective accumulation controls in place.

D.3 Market risk

Market risk is the risk of a loss of value due to changes in financial market conditions. Risk factors include:

- Equity market price changes
- Real estate market price changes
- Changes in interest rates
- Credit and swap spread changes
- Issuer defaults
- Changes in currency exchange rates

ZLIC manages the market risk of assets relative to liabilities on an economic total balance sheet basis. This is done to achieve the maximum risk-adjusted excess return on assets relative to the liability benchmark, while considering ZLIC's risk tolerance and local regulatory constraints.

Market risk is significant for ZLIC when taking total risk capital requirements within the SST into account. The greatest market risks for ZLIC are related to equity market prices, interest rates, changes in real estate values and credit spread risk. These risks are of particular relevance to ZLIC, due to the characteristics of life insurance liabilities. Interest rate risk arises if the market value of assets declines by more or increases by less than the market value in liabilities, resulting in lower risk-bearing capital for shareholders.

The interest rate sensitivity of the investments is regularly reviewed as part of asset liability management (ALM) analysis and in the local ALM investment committee (ALMIC), and, where necessary, managed by taking the appropriate measures. Investment management is of particular importance in this regard, as outlined in the Zurich Risk Policy (ZRP). Duration and convexity gaps between investment portfolios and insurance liabilities must be addressed through consistent ALM. It is also important to actively review the market environment to identify potential opportunities to further reduce interest rate risk. Transactions with derivative financial instruments are undertaken exclusively for hedging purposes.

D. Risk profile (continued)

The risk of market price changes that may have a material impact on ZLIC's capital and earnings can be mitigated through rigorously defined asset-class targets and limits, as well as interest-rate sensitivity targets and limits, which are regularly monitored, reported and reviewed in the ALMIC. Investment management makes every effort to achieve adequate asset diversification and maintain good credit quality within the bond portfolio.

ZLIC's real estate portfolio is substantial. ZLIC's Swiss real estate portfolio is managed by Zurich Invest AG (ZIAG). Apart from adhering to ZRP rules and the FINMA investment directive, ZIAG carries out an annual revaluation of the property portfolio. A potential change in real estate values represents another key risk. Investment management reviews the real estate strategy for Switzerland to ensure portfolio resilience in the event of a market correction.

For ZLIC, the investment return is monitored as a key risk; investment management explores opportunities to enhance economic and accounting returns within economic capital (SST) guidelines and tied asset constraints.

ZLIC follows the prudent person principle. Potential concentration risk in investments is limited by the appropriate level of diversification. The strategic asset allocation (SAA) aims to diversify investments across different asset classes, countries, industry sectors and issuers. To further reduce the concentration risk, the investment guidelines, which follow FINMA requirements, as well as Swiss Insurance Supervision Law, define limits on sector and issuer, depending on asset class or issuer. Investment supervision and monitoring is done on a regular basis by the ALMIC.

To control concentration risk, ZLIC adheres to provisions set out in the ZRP and adheres to all regulatory requirements related to the mix and range of investments.

D.4 Credit risk

Credit risk is the risk associated with a loss or potential loss resulting from counterparties failing to fulfill their financial obligations to ZLIC in accordance with the agreed terms.

This risk to ZLIC mostly relates to third-party investments in Switzerland. However, ZLIC also faces intragroup credit risk through its lending to ZIC, as well as risk related to very small amounts of receivables and reinsurance credit risks.

ZLIC's objective in managing credit risk exposures is to maintain these risks within parameters that reflect their strategic objectives, and its risk appetite and tolerance. Sources of credit risk are assessed and monitored on a continuous basis.

In cases in which credit risk deteriorates, receivables from policyholders are adjusted by a lump sum to avoid accumulating significant risk positions.

D. Risk profile (continued)

D.5 Operational risk

Operational risk is the risk of financial loss, adverse reputational, legal, or regulatory impact, resulting from inadequate or failed processes, people, systems or from external events, including fraud, catastrophes, or failure in outsourcing arrangements.

ZLIC applies the following framework to assess operational risk

Key operational risks comprise threats to achieving the overarching strategic goals of ZLIC. Zurich has operational risk processes to identify, assess, quantify, mitigate, monitor, and report operational risk within the Group, which ZLIC also applies. The core components of the operational risk management framework are:

– Identification and assessment of operational risks: Risks which are identified and assessed above a certain threshold require a risk response. Mitigating actions are documented and tracked on an ongoing basis. In the assessments, ZLIC uses sources of information such as the TRP process, internal control assessments, audit findings and operational event data.
– Operational event management (OEM): The ZRP requires documentation and evaluation of operational events above a threshold in a Group-wide database. To avoid recurring operational loss events, 'near misses' and complaints, mitigating actions are put in place.
– Reporting: Regular reports on the risk profile, current risk issues, policy adherence requests (exceptions) and actions to make improvements are prepared. There are procedures in place for referring risk issues to the Management Board.
– Internal control system: Internal controls are one of ZLIC's responses to reduce material operational risks, including those in financial reporting and compliance, to an acceptable level.

The ZRP policy manuals and standards contain requirements for managing operational risks related to the handling of data, information security, business resilience, models, security, safety practices, third parties, internal controls, Group insurance programs and risks pertaining to investment operations, fraud and project risks.

Operational risks pertaining to services supplied by third parties are systematically monitored based on the requirements defined in the third-party ZRP manual.

D.6 Liquidity risk

Liquidity risk is the risk that ZLIC's liquidity sources are insufficient to meet its liquidity needs under either current conditions or possible stress in the future.

ZLIC holds a significant liquidity position in a group internal cash pool, where it can access liquidity when needed. Ownership of the cash provided to the pool lies with ZLIC.

Within the ZLIC Risk Appetite Statement a number of long- and short-term risk tolerance limits are defined, monitored and reported in the corresponding Risk Report which is presented at the quarterly ZLIC board meetings.

D. Risk profile (continued)

D.7 Other material risks

D.7.1 Strategic risk

ZLIC defines strategy as the long-term plan of action designed to allow ZLIC to achieve its goals and aspirations based on Zurich's purpose and values. Strategic risk is defined as the risk of the strategy, or parts thereof, being rendered sub-optimal or unachievable.

Strategic risks can arise from:

- Internal triggers such as inadequate risk-reward assessment of strategic plans or changes to underlying assumptions.
- External triggers including macroeconomic or geopolitical events or trends, regulatory or legal changes, or developments in the competitor landscape.

Strategic risks can result in:

- the expected value of the strategy, even if executed as intended, being limited; or
- creating a misalignment between the strategy and Zurich's purpose and values.

Strategic risks are further categorized as follows:

- Strategic investments, mergers and acquisitions (M&A), joint ventures, divestments
- Markets and competition
- Brand
- Sustainability

ZLIC identifies, assesses, and manages risks associated with strategic business decisions through its risk assessment processes and tools, including the Total Risk Profiling™ process.

D.7.2 Reputational risk

Many factors can affect ZLIC's reputation including corporate strategy, market conduct, relationship with customers, brand image, underwriting practices, claims handling, marketing efforts, corporate responsibility, workplace culture, regulatory compliance, financial performance, communications, and crisis management. Every risk type has potential consequences for ZLIC's reputation. Effectively managing each risk type supports preventing adverse reputational outcomes.

ZLIC aims to preserve its reputation by:

- Adhering to applicable laws and regulations.
- Following the core values and principles of the Group's code of conduct that promote integrity and good business practice.

Zurich's code of conduct applies to all its employees. Employees must complete an annual training session to make them aware of ZLIC's guidelines and approach, and employee surveys are regularly carried out, offering another way to identify potential risks to Zurich's reputation.

Specific reputational risks are evaluated as part of the TRPs, and if necessary, addressed with appropriate mitigating measures.

E. Valuation

E.1 Overarching valuation principles

For SST calculations, all assets and liabilities are valued in accordance with economic principles in a market-consistent manner and their valuations are presented in the MCBS. In general, the MCBS applies the same fair value measurement and hierarchy as the Group IFRS annual financial statement, unless stated otherwise. In such cases, fair value is determined on a best-estimate valuation basis, without margins, using assumptions and parameters as defined by FINMA or based on management's judgment.

To summarize, the following valuation hierarchy applies for assets:

MCBS valuation principles

Mark-to-market	Highest priority for third-party assets, IFRS equity instruments and eligible capital instruments	Fair value as defined in the consolidated IFRS financial statements;
Mark-to-model	If mark-to-market cannot be applied	Fair value as defined in the consolidated IFRS financial statements; or Best estimate valuation using parameters or assumptions explicitly stipulated by FINMA (e.g., liabilities valued at discounted cash flows using risk-free rate, thus, without consideration of own credit risk).
IFRS carrying value		As a practical expedient, IFRS carrying value other than fair value is used as proxy to market-consistent valuation provided such measurement can be considered reasonable. For example, IFRS carrying value may be considered as a reasonable proxy based on the following considerations: – It represents current balances (e.g., cash accounts); or – It involves high-frequency turnover with daily settlements (e.g., operational clearing accounts); or – It is expected to be settled/realized within a relatively short period after origination (generally, within three months and always less than twelve months) and is exposed to only insignificant risk of changes in value.

When applying the mark-to-model method, adequate and best-practice valuation models and methodologies are used and sufficiently documented.

Within asset classes, investments accounted for at fair value under IFRS will be valued the same in MCBS. This includes fair value through other comprehensive income (OCI) and fair value through profit or loss equity and debt instruments, real estate for investment, investment trusts, hedge funds, derivatives and unit-linked investments.

For investments accounted for at nominal value, at amortized cost or at equity method under IFRS, the market-consistent value will not be equal to IFRS carrying value and will be determined using IFRS fair value principles. This includes amortized cost bonds, real estate held for own use or for sale and mortgages.

Within the Zurich Insurance Group, the MCBS value of intra-group loans is symmetrical. It is based on IFRS carrying values and adjusted, as needed, to allow for valuation at risk-free interest rates.

E. Valuation (continued)

E.2 Market-consistent balance sheet following SST principles

Asset valuation MCBS vs Swiss local statutory

in CHF millions, for the years ended December 31	2023 (SST)	**2024 (SST)**	Difference to 2023 (SST)	**2024 (Swiss local stat.)**	Difference SST to Swiss local stat.

E. Valuation (continued)

Assets

The MCBS value of assets was CHF 22 billion at year-end 2024. The value of investment assets remained at CHF 18 billion. The value of non-investment assets, including assets for unit-linked business, receivables from derivative financial instruments and cash and cash equivalents remained stable at CHF 4 billion. The amount of real estate, mortgages and equities decreased owing to sales and repayments over the year whereas the amount of fixed-income securities and other investments increased.

While assets are valued in a market-consistent manner in MCBS for SST calculations, under Swiss local statutory reporting, assets are carried at amortized cost, at cost value less impairment, at the lower of cost or market value, or at nominal value less impairment. These differences in approach can lead to material differences between the asset values as determined using IFRS, Swiss local statutory reporting or MCBS. This effect is observed in the differences in values of real estate, equities, mortgages, derivatives – in particular swaptions – and fixed income securities. In addition, hedge funds and private equity are classified as equities under Swiss local statutory reporting rather than as alternative investments in the MCBS. The aggregate value of investment assets was CHF 1.9 billion greater for SST than for Swiss local statutory reporting at year-end 2024.

There are further classification and valuation differences to be noted in the different ways that the SST and the Swiss local statutory reporting non-investment assets. Cash pooling assets are classified as receivables under Swiss local statutory reporting, whereas under SST they are classified as cash and cash equivalents. Overall, the differences in the remaining non-investment assets result in an SST valuation for year-end 2024 that is CHF 0.3 billion higher than would be the case using Swiss local statutory reporting. This is mainly due to the differences in valuation related to derivatives – swaptions in particular.

Overall, the value of assets is CHF 2.2 billion higher calculated using the market-consistent SST basis, than it is using the amortized cost value basis under Swiss local statutory reporting. That represents an increase compared with 2023, reflecting the impact of unrealized gains on fixed income securities over the year.

E. Valuation (continued)

Liability valuation MCBS vs Swiss local statutory

Insurance liabilities

- For SST, liability cash flows are projected based on best-estimate demographic and policyholder behavior assumptions. These assumptions are generally company specific, in particular for expenses, and demographic assumptions. These assumptions are derived from experience analyses of historic values and industry data. Specific assumptions are described as follows:
- Demographics: Mortality, longevity, morbidity incidence and morbidity recovery assumptions are based on experience data analysis including Swiss and other industry statistics.
- Policyholder behavior: Policyholder behavior assumptions include surrenders, lapses and option take-up and are based on ZLIC's own experience.
- Further company-specific assumptions: Expenses are calculated using the CFO Forum Principles of experience analysis as a basis. No future improvements from efficiencies are considered in the calculation, and one-off expenses are also excluded.
- Management actions, such as strategic asset allocation and policyholder participation principles, are modeled consistently in line with agreed practices.

E. Valuation (continued)

The run-off view prescribed by the FINMA standard model is used. This excludes discretionary benefits, and for Swiss Corporate Life & Pensions business, excludes future premiums after the second projection year.

For SST, economic assumptions are used as provided by FINMA and are determined such that projected cash flows are valued in line with the prices of similar cash flows that are traded on capital markets. Risk-free valuation yields are calibrated to levels matching mid-market quoted government bond prices. Market-consistent liabilities are calculated prior to shareholder tax.

Market-consistent liabilities are best estimates. They differ from the local statutory liabilities, which correspond to liabilities valued according to more prudent assumptions as required by the Swiss Code of Obligations.

Life insurance liabilities gross of reinsurance are part of the MCBS and apart from a few 'de minimis' items are all directly written. Overall, ZLIC makes limited use of reinsurance as a proportion of overall liabilities; corresponding reinsurance assets are shown on the asset side of the MCBS on the previous page.

The market value of insurance liabilities remained at CHF 15 billion at year-end 2024.

In contrast to the market-consistent view, valuation for Swiss local statutory reporting embeds a degree of prudence in demographic assumptions. The valuation interest rate for Swiss local statutory reserving is also set cautiously. The overall Swiss local statutory reserving basis is therefore more conservative than the best-estimate approach used for SST, and as such the overall value of all insurance liabilities (including the market value margin) was CHF 2 billion lower for SST than it was for Swiss local statutory reporting as of December 31, 2024.

Other liabilities

These liabilities include various positions valued at market value. They include cash pooling liabilities, subordinated debt, collateral payables from hedging activities, repurchase obligations and tax provisions. For SST the total other liabilities remained at CHF 2 billion. Overall other liabilities for SST were CHF 0.04 billion higher than other liabilities for Swiss local statutory reporting, primarily due to SST provisions for deferred real estate taxes, partially offset by non-technical statutory provisions which are not relevant for best-estimate SST valuation. There are further classification and valuation differences between the SST and the Swiss local statutory reporting for other liabilities. Cash pooling liabilities are classified as payables under Swiss local statutory reporting, whereas under SST they are classified as interest bearing liabilities.

F. Capital management

ZLIC's capital management and planning approach is embedded in the overall capital management policy of Zurich Insurance Group. The approach is designed to maximize long-term shareholder value through an optimal capital allocation, while managing the balance sheet in accordance with regulatory and solvency requirements, including managing and monitoring of local statutory capital adequacy of ZLIC operations in Switzerland, as well as in its foreign branch.

As a legal entity, ZLIC is obliged to take into account its regulatory solvency position as part of its business plans. This includes planned dividends and cash remittances, including possible risks to pay these in future.

The capital planning horizon is set in line with the overall planning cycle.

In addition to the capital and liquidity held within ZLIC, Zurich holds substantial amounts of capital and liquidity centrally at Group level. This centrally held capital can be deployed into subsidiaries if needed, (and upon exhaustion of agreed local capital management actions), providing resilience to absorb potential losses caused by very large risk events. The solvency and financial condition of ZLIC must therefore be understood in the context of the resilience and stability of the Group.

ZLIC must maintain regular monitoring to keep it within the solvency and capital requirement targets set in accordance with ZLIC's Risk Appetite Statement as described in this report and ensure adherence to local laws and regulations. In particular, ZLIC must ensure compliance with regulatory capital reporting standards such as correct classification and reporting of own fund items.

ZLIC is subject to the SST and tied asset regulations, and Swiss law on solvency more generally. Statutory shareholder equity, SST and tied assets are thus considered when planning capital or cash repatriations to the Group.

Internal target ratios and/or thresholds, as defined in ZLIC's Risk Appetite Statement, are considered when assessing and defining the potential to allow cash to be lent to, or for dividends to be paid to the Group.

Tied asset requirements are calculated and tracked according to FINMA guidelines and their development is analyzed. From a risk appetite perspective, ZLIC's Board is informed in the event that any transaction or business plan might result in ZLIC's tied asset ratio falling below defined levels.

The following table shows the composition of shareholders' equity as of December 31, 2024 and 2023 respectively (according to Swiss local statutory reporting), and before appropriation of available earnings. The CHF 51 million decrease in equity capital in 2024 was driven by the CHF 175 million dividend paid which was more than the CHF 124 million of net income after taxes.

Shareholders' equity

in CHF millions, as of December 31	2023	**2024**	Change
Share capital	60	60	–
Statutory retained earnings	41	41	–
Voluntary retained earnings	803	745	(58)
Profit carried forward	0	0	0
Net income after taxes	117	124	7
Total shareholders' equity	**1,021**	**970**	**(51)**

Swiss local statutory shareholders' equity is CHF 3.9 billion lower than SST risk-bearing capital. As explained in more detail in the previous section, this difference is primarily due to the following: a CHF 3.6 billion difference in asset and liability valuation, together with CHF 0.5 billion eligible subordinated debt that is not treated as a liability under SST, partially offset by the CHF 0.2 billion proposed cash dividend, which reduced SST risk-bearing capital but not local statutory shareholders' equity.

G. Solvency

ZLIC assesses its solvency under the SST. In performing the SST, ZLIC assesses its solvency and financial condition, expressed as the SST ratio. The SST ratio must be calculated as per December 31 and must be submitted to FINMA. For business focused on Switzerland, FINMA typically requires the SST standard model to be used, and in line with this ZLIC uses the SST standard model for SST.

ZLIC is part of the Zurich Insurance Group which maintains a strong capital position. As of December 31, 2024, the IFSR of ZIC was 'AA/stable' by Standard & Poor's, 'Aa2/stable' by Moody's and 'A+(Superior)/stable' by A M Best. AM Best's Issuer Credit rating is aa/stable. Furthermore, Zurich Insurance Group's unaudited estimated SST ratio was 252 percent as of December 31, 2024.

Breakdown of target capital into essential components

ZLIC's implementation of the SST standard model follows the design principles and requirements set out by FINMA. In particular, the risks considered are market, insurance and credit risks. For ZLIC, the risks that are most material are the following:

- Market risk (ALM) covers potential adverse changes in net asset values due to movements in markets that affect, for example, interest rates, credit spreads, equity prices, real estate and foreign exchange rates, as well as respective volatilities.
- Life insurance risks comprise the risks of an adverse movement of in-force business due to developments in biometric experience relative to current expectations or resulting from unanticipated adverse changes in maintenance expenses or persistency experience.
- Credit risks comprise the risk of a decrease in the value of assets due to changes (migrations) in the credit quality of counterparties and eventual default. The SST standard model allows for both third-party investment credit risk, in which exposure consists mainly of bonds, mortgage-backed securities, mortgages, loans and cash, and other credit risks. Other credit risks include reinsurance credit risk in which the exposure consists of net reinsurance receivables, receivables credit risk, and intragroup credit risk.

For the years ended December 31, 2024 and 2023, respectively, the break-down in target capital was as follows:

Solvency

in CHF millions, for the years ended December 31	2023	Adjustments previous period	2024
Derivation of risk-bearing capital			
Market-consistent value of assets minus market-consistent value of liabilities	4,410		4,530
Deductions (proposed dividends)	(175)		(165)
Tier 1 risk-absorbing capital instruments (RAC) counted towards core capital	–		–
Core capital	**4,235**		**4,365**
Supplementary capital	541		541
Risk-bearing capital	**4,776**		**4,907**
Derivation of target capital			
Insurance risk	942		990
Market risk	1,270		1,305
Credit risk	436		400
Diversification effects	(619)		(638)
Other effects on target capital	(146)		(188)
Target capital	**1,883**		**1,870**
SST ratio	**254%**		**262%**

G. Solvency (continued)

The values shown here already reflect diversification within each risk type with regard to individual risk drivers. The item 'Other effects on target capital' consists of run-off expenses, the effect of scenarios on target capital, the release of cost of capital provisions and the reduction in target capital for the expected financial result. The SST ratio is defined in the Insurance Supervision Ordinance as the ratio of risk-bearing capital to target capital.

Comments on the SST ratio

The ZLIC SST ratio of 262 percent as of December 31, 2024 was higher than 254 percent at December 31, 2024 ZLIC's capitalization remains strong as measured by SST. The SST ratio increased mainly due to new business and high returns in equity and real estate in particular, changes to the market value margin introduced by FINMA, partially offset by the impact of the proposed dividend and operating variances.

Risk-bearing capital increased and target capital reduced. The CHF 0.1 billion increase in risk-bearing capital was driven by new business and high returns in equity and real estate in particular, changes to the market value margin introduced by FINMA, partially offset by the impact of the proposed dividend and operating variances. The reduction in target capital was driven by changes to the SST standard model introduced by FINMA in 2024, that increased the market value margin but decreased target capital.

The data, methods, and results of the Swiss Solvency Test for ZLIC are produced in accordance with the Insurance Supervision Ordinance (ISO, art. 21 seqq.). ZLIC's SST is calculated using the SST standard model.

Breakdown of market risk into essential components

The following chart shows the market risk broken down into its essential components:

- Interest rate risk refers to the risk of a reduction in risk-bearing capital due to movements in interest rates.
- Spread risk, equity risk and real estate risks refer to the risks that a decline in market prices will reduce the value of debt, equity and real estate assets, respectively. For unit-linked business, such a decline would largely be reflected in reduced liability values. For the rest of ZLIC's business, the loss in market value due to a widening of credit spreads or a fall in equity or real estate prices would not be passed on to policyholders to the same extent, reducing risk-bearing capital. Private equity and hedge fund risks are shown with equities.
- Other risk relates to the change in value of assets and/or liabilities in response to changes in implied volatilities as well as government bond vs swap spread risk.

Solvency – Market risk

in CHF millions, for the years ended December 31	2023	Adjustments previous period	**2024**
Market risk derivation of target capital			
Interest rate risk	514		457
Spread risk	522		527
Exchange rate risk	180		264
Equity risk	515		595
Real estate risk	493		459
Other risk	36		41
Diversification	(990)		(1,038)
Total of market risk target capital	**1,270**		**1,305**

Market risk increased during 2024, primarily due to an increase in equity and exchange rate risk partially offset by reductions in interest rate risk and real estate risk.

G. Solvency (continued)

Breakdown of life insurance risk into essential components

The following table shows the life insurance risk broken down into its essential components:

- Mortality risk is the risk that liabilities increase through higher-than-expected mortality rates.
- Longevity risk is the risk that liabilities increase through lower-than-expected mortality rates for annuitants.
- Morbidity incidence risk is the risk that liabilities increase through higher-than-expected rates of morbidity inception.
- Morbidity recovery risk is the risk that liabilities increase through lower-than-expected rates of recovery.
- Lapse risk is the risk that more policyholders than expected allow their policies to lapse or surrender their policies to the disadvantage of ZLIC.
- Expense risk is the risk that the expenses of running the in-force business are higher than expected.

Solvency – Insurance risk

in CHF millions, for the years ended December 31	2023	Adjustments previous period	2024
Insurance risk derivation of target capital			
Life insurance liabilities			
Mortality	48		52
Longevity	318		320
Morbidity incidence	217		224
Morbidity recovery	945		1,002
Business risk			
Expenses	374		382
Lapses	37		37
Option take-up	0		0
Diversification	(998)		(1,027)
Total of insurance risk target capital	**942**		**990**

Insurance risk increased to CHF 1.0 billion. The main driver of the increase was increased morbidity risk in Corporate Life & Pensions from lower interest rates.

Breakdown of risk-bearing capital into essential components

The following table shows a breakdown of the risk-bearing capital based on its essential components. The risk-bearing capital calculation starts with assets less liabilities, as set out in the market-consistent balance sheet. The core capital is then calculated based on net assets less liabilities and deductions for proposed dividends. Subordinated debt with equity features approved by FINMA as eligible for inclusion in risk-bearing capital is included in the liabilities and is added to the core capital to arrive at the amount of risk-bearing capital.

Forward-looking statements include statements regarding Zurich Life Insurance Company Ltd's targeted profit, return on equity targets, expenses, pricing conditions, dividend policy and underwriting and claims results, business initiatives (including, but not limited to, sustainability matters) as well as statements regarding Zurich Life Insurance Company Ltd's understanding of general economic, financial and insurance market conditions and expected developments. Undue reliance should not be placed on such statements because, by their nature, they are subject to known and unknown risks and uncertainties and can be affected by other factors that could cause actual results and plans, policies, initiatives and objectives of Zurich Life Insurance Company Ltd to differ materially from those expressed or implied in the forward-looking statements (or from past results). Factors such as (i) general economic conditions and competitive factors, particularly in key markets; (ii) the risk of a global economic downturn, in the financial services industries in particular; (iii) performance of financial markets; (iv) levels of interest rates and currency exchange rates; (v) frequency, severity and development of insured claims events; (vi) mortality and morbidity experience; (vii) policy renewal and lapse rates; (viii) increased litigation activity and regulatory actions; and (ix) changes in laws and regulations and in the policies of regulators and the possibility of conflict between different governmental standards and regulatory regimes may have a direct bearing on the results of operations of Zurich Life Insurance Company Ltd and on whether the targets will be achieved. Zurich Life Insurance Company Ltd undertakes no obligation to publicly update or revise any of these forward-looking statements, whether to reflect new information, future events or circumstances or otherwise.

It should be noted that past performance is not a guide to future performance. Please also note that interim results are not necessarily indicative of full year results.

Persons requiring advice should consult an independent adviser.

This communication does not constitute an offer or an invitation for the sale or purchase of securities in any jurisdiction.

THIS COMMUNICATION DOES NOT CONTAIN AN OFFER OF SECURITIES FOR SALE IN THE UNITED STATES; SECURITIES MAY NOT BE OFFERED OR SOLD IN THE UNITED STATES ABSENT REGISTRATION OR EXEMPTION FROM REGISTRATION, AND ANY PUBLIC OFFERING OF SECURITIES TO BE MADE IN THE UNITED STATES WILL BE MADE BY MEANS OF A PROSPECTUS THAT MAY BE OBTAINED FROM THE ISSUER AND THAT WILL CONTAIN DETAILED INFORMATION ABOUT THE COMPANY AND MANAGEMENT, AS WELL AS FINANCIAL STATEMENTS.
