Japan's equity outperformance versus China seems overdone

Source: MSCI, Bloomberg, ZIG

Though it has never happened before, investors were concerned that the debt ceiling negotiations between President Biden and Republican House Speaker McCarthy would fail to reach a resolution. Now that the deal is likely to pass both the House of Representatives and the Senate, a potential tail risk for financial markets has been removed and should lift investors' spirits. However, even if the bill passes both houses as expected, fundamental risks for the US economy remain. We maintain our long standing view that a recession is likely later this year. However, market participants appear to be focussing on other risks as well. China's poor PMIs for May contributed to the S&P 500 falling below 4'200, following a short breakout on the US debt ceiling deal. Unless a convincing upside break with high trading volume is confirmed shortly, we believe a neutral stance towards equities versus government bonds is warranted in the near term.

Turning to the equity markets of the other two major global economies, China and Japan, we note that the 63% slump in the MSCI China between February 2021 and November 2022 was the result of a severe shift in investor confidence from euphoria to despair. Government measures to curtail the business of major internet companies in order to bring them in line with President Xi's 'Common Prosperity' policy resulted in a selloff. As these companies were equity index heavyweights, the market impact was severe and even resulted in discussions as to whether Chinese equities are 'investable' in principle. The rebound in late 2021, following China's end to Covid-related restrictions, lifted the mood and induced a rally, which ended abruptly, however, when it became clear that the economic reopening boom was to be short-lived.

Meanwhile, the MSCI Japan equity index has been moving along in a major volatile 'saucer' pattern from September 2021 until recently, with the 'zig-zag' waves moving in line with Covid infection waves that negatively impacted domestic consumption, while exports were suffering from supply-chain disruptions. As visible in the chart, the recent breakout to the upside was induced by strong foreign buying, driven by expectations of improving corporate governance following guidance from the Tokyo Stock Exchange, the reflation of the economy and a weaker yen versus major currencies.

While more than half of the reopening gains for Chinese equities have evaporated in the last four months, Japanese equities appear to have become everybody's darling, significantly outperforming Chinese equities. While we believe this new trend can prevail for longer, we think the move is overextended in the short term, suggesting a healthy correction may occur.

Market Assessment

Key developments

- Fears of an US debt ceiling impasse have faded following an agreement between the US Government and the Republicans
- China's economic recovery stalls, while the services driven boom in Japan continues and manufacturing activity rebounds
- Global equities keep moving sideways, urging a wait-and-see attitude in our positioning

Zurich's view

Though our view remains cautious in the long term, we have moved to a neutral assessment of equities versus government bonds in the short term. We believe some upside risk in global equities remains, driven by the surge of a few heavyweight Al-related stocks, an improving corporate earnings outlook and the fading risk of an US debt ceiling impasse. Momentum driven market moves tend to last longer than the fundamental assessment suggests, while any signs of exuberance on the upside should be short lived.

As for government bond markets, we believe slowing growth and a peaking of policy rates should lead yields lower, but conditions will remain volatile and dependent on inflation data in the months ahead

We believe risk reward in credit, particularly US Investment Grade and global High Yield credit, is unattractive. Spreads appear tight on a historical basis versus several leading indicators, which forebodes a deterioration in credit fundamentals such as default rates. Defaults have picked up at a sharp pace while bank sector issues are likely to lead to credit conditions remaining tight for some time.

Zurich's view Key developments Manufacturing activity has weakened further, led by disappointing The economy remains unusually Global activity in China and a fading growth rebound in Europe. World trade divergent with services strong but remains in contraction, and leading Asian trade data do not signal a manufacturing weakening further turnaround. Construction and housing activity are also lacklustre, Aggressive policy tightening will despite signs of stabilisation in some regions. By contrast, services weigh on activity going forward with have gained further momentum, boosted by strong leisure and travel some further rate hikes still likely demand, and job markets are historically tight. Given sticky demand and inflation in the services segment, central banks are maintaining a Slowing growth and a peaking of hawkish stance, with some further rate hikes expected. We continue to rates should lead government bond expect the lagged effects of policy tightening to lead growth lower in yields lower, but conditions will the months ahead, with risk to the downside. remain volatile and data dependent in the months ahead The economic environment has deteriorated further, with the Headline inflation falls to 4.9% YoY US Conference Board's Leading Index now at -8.0% YoY, a level usually in April, the lowest in two years only seen in recession. Headline inflation fell to 4.9% in April, the The Fed hikes again but is signalling lowest since April 2021. Core inflation also slowed marginally from a pause at its next meeting in June 5.6% to 5.5%. While the slowing trend is promising, the monthly rate of 0.4% for both headline and core inflation is still too high for the Fed to The stock market moves higher, be convinced that inflation is under control. Nevertheless, we expect driven by the technology sector the Fed to remain on hold in the coming months. Meanwhile, the stock market rose back to the upper end of its recent trading range despite the deterioration in the growth outlook and increasing headwinds for corporate earnings. The equity rally is becoming increasingly unbalanced, however, driven by a small number of large tech stocks. Helped by base effects, headline inflation fell from 10.1% YoY in March Headline inflation falls substantially, UK to 8.7% in April. However, the acceleration of the MoM rate from 0.8% but core measures remain very to 1.2%, as well as the pickup in core inflation from 6.2% YoY to 6.8% sticky show that inflation remains far too high. Since price pressure is The labour market eases at the increasingly domestic, it is very likely that the BoE will continue margin with the unemployment rate tightening its policy. Meanwhile, the economy is losing momentum ticking up to 3.9% with the Manufacturing PMI falling from 47.8 in April to 46.9 in May. Service activity is holding up better with the Services PMI only down Business activity is slowing, mostly from 55.9 to 55.1. The tight labour market is showing signs of easing at driven by weakness in the the margin with the unemployment rate ticking up from 3.8% to 3.9% in manufacturing sector March while jobless claims have reached the highest level since early 2021, but neither factor should stop the BoE from hiking again in June. The ECB raised policy rates by 25bps in early May. This represented a The ECB raises policy rates by Eurozone step down from the 50bp increment of rate increases at the last few 25bps, bringing the deposit rate from 3.0% to 3.25% meetings. However, ECB President Christine Lagarde indicated that the Bank is expecting to increase interest rates further saying that, Latest PMIs suggest the Q1 bounce '[W]e are on a journey and we are not pausing.' Inflation remains in business activity is already fading uncomfortably high for the Central Bank, with the flash estimate for April showing headline inflation up by a tenth of a percentage point to Revisions to German GDP data 7.0% YoY and core inflation still elevated at 5.6% YoY. However, some show that it did in fact experience a recent data are indicating that the bounce back in activity in Q1 is recession over the winter already fading. The Flash PMIs disappointed in May, with the manufacturing sector particularly weak, while hard data such as retail sales and industrial production have also been soft. Led by strong services consumption and business investment, GDP GDP growth rebounds in Q1, led by Switzerland grew by 0.3% QoQ in Q1, up from flat growth in Q4. Leading indicators solid services consumption and have weakened further, however, indicating that the Q1 rebound is business investment as well as a already fading. The KOF leading indicator fell sharply for a second stabilisation in construction activity consecutive month in May, with weakness driven by the financial and Leading indicators weaken further, manufacturing sectors. The Manufacturing PMI has also slumped, with however, indicating that a material current output and new orders particularly weak. On a positive note, slowdown in economic activity is consumer and producer prices have fallen further, and wage data underway show that nominal wages only expanded by 0.9% in 2022, confirming

Consumer and producer price

inflation fall further, reducing the

need for further policy tightening

that underlying wage and price pressures remain contained. Further

on hold in June, though the decision will be finely balanced.

rate hikes are not needed in our view, and we anticipate the SNB to be

Zurich's view Key developments Japan moved back into the limelight with PM Kishida hosting the G7 Japan's recent foreign policy steps Japan meeting and holding talks with heads of state from the 'Global South' are applauded by many observers and Ukraine. Ties with South Korea as well as several African countries The economy continues to benefit have strengthened, and public polls are showing strong support for from the strong services sector the Kishida led government. While officially denied, we believe snap elections could be held in Q3 to stabilise the LDP led government. The MSCI Japan surges to a 33-Leading indicators confirm that Japan's economy remains on a firm year high, driven by foreign footing, driven by strong services demand and increasing tourism, investors while manufacturing is recovering as well. Equity indices like the MSCI Japan and the Topix are at 33-year highs, outperforming global equities. Stronger share buybacks and other measures to improve capital efficiency have not gone unnoticed by foreign investors. China's reopening boom has lost steam, with economic activity Economic activity slows following China slowing markedly in April and May. Pent-up demand for property the reopening boom investments has subsided quicker than expected, creating a blow to The property market remains the related domestic demand for which foreign trade cannot compensate. weakest link The labour market remains stable overall, but the youth unemployment rate has surged above 20%. We believe targeted fiscal and monetary Chinese equities have now given up support measures are in the offing, though old-style major stimulus more than half of the reopening packages are not anticipated. Inflation has come to a standstill on the boom consumer level, while deflationary trends on the producer level have intensified. Over the last four months, the MSCI China has given up more than half of its reopening gains from the prior three months as the appetite of foreign investors has waned markedly. The Reserve Bank of Australia unexpectedly raised its cash rate to The RBA lifts its cash rate to 3.85% Australia 3.85% after an April pause. Despite still rising rates, home prices rose in May, following an April pause for the second month in a row. April saw unemployment rise from 3.5% The 2023-24 budget outcome to 3.7%, suggesting a tentative easing in the job market, although work surpasses expectations, allowing hours continued to trend higher. The 2023-24 budget is forecasting a major fiscal shift, from an AUD 36.9bn deficit to a surplus of AUD targeted fiscal stimulus 4.2bn, supporting a AUD 12bn increase in fiscal outlays in the coming Australian equities underperform year. Australian equities dipped last month, reflecting the lacklustre compared to other developed financial stocks, while material stocks did not benefit significantly from markets, and bond yields move China's service-led reopening. Australian government bond yields sharply higher, mirroring global moved sharply higher amid a surge in global core bond yields, trends spooked by uncertainties surrounding the US debt ceiling. Q1 GDP data showed resilience thanks to buoyant domestic demand ASEAN's Q1 GDP data remain **ASEAN** resilient, driven by solid domestic and a strong service sector with China's reopening continuing to demand, while global trade boost tourism. In contrast, exports underperformed markedly, with April figures showing a YoY decline of -29.4% and -17.4% in Indonesia weakness continues weighing on and Malaysia, respectively, reflecting the ongoing fragility of global exports. trade. Meanwhile, inflation is largely stable, allowing most central Inflation is broadly stable across the banks to maintain steady policy rates. An exception is Bank Negara region, enabling most central banks Malaysia, which unexpectedly hiked rates by 25bp to 3%, attributing it to maintain steady policy rates to stronger-than-expected domestic demand, despite moderate inflation. Equity performance in ASEAN has been lacklustre, trailing ASEAN equity performance is behind other developed markets, and fund inflows into Indonesian lagging behind developed markets equities have recently slowed after a relatively strong period. Inflation continues to decline in most of the region, permitting central In Mexico, Banxico ended the LatAm banks to be less hawkish but still maintain their forward guidance of monetary policy hiking cycle while keeping policy rates unchanged for an extended period. The there have been no cuts yet in Brazil exception is Argentina, where annual inflation reached 108.8%, and the and Chile reference rate was hiked to 97% amidst increasing pressure on the Economic activity in LatAm remains currency and wider external imbalances. Equities have outperformed resilient, despite the restrictive real other EMs, driven by Brazil and Chile. In Brazil, the Lower House

interest rates

rapidly

LatAm equity markets outperform
